

VINTAGE FILAMENT

ST18 SHAPE

This historic bulb is a Steampunk favorite with its glowing cage-shaped filament surrounding a central glass support. The circa 1912 design features a tungsten filament, which burns three times brighter than its carbon filament precursors. A popular choice for exposed socket pendants, sconces and chandeliers. Bulb has approximately 3000 hour lifespans.

VINTAGE FILAMENT

T9 SHAPE

A long single loop filament suspended along a central glass support gives this bulb a distinctive look. Crafted to preserve the look of early 20th-century lighting, bulb adds a low warm glow to any vintage or contemporary decor. An intricate tungsten filament design and long tubular shape makes these bulbs ideal for any transparent light fixture, Bulb has approximately 3000 hour lifespans.
