

This range of quality 29mm diameter circular fluorescent lamps offer the same advantages as linear fluorescent tubes. These lamps are available in both standard and triphosphor variants in a choice of three colour temperatures

FEATURES

- Range of colour temperatures and wattages available
- The triphosphor version offers higher light output for the same energy consumption as the standard version with a lower rate of light loss as it ages
- The triphosphor version also offers excellent colour rendition capabilities
- May be operated with standard control gear and starters or with electronic control gear

APPLICATIONS

- For use in both domestic and commercial applications
- Illuminated signs and displays
- Suitable for indoor use only
