

Halogen Dichroic Lamps

Low voltage halogen dichroic lamps offer the following advantages:

- A brighter, crisper light than traditional incandescent lamps
- A significantly longer lamp life than old GLS lamps
- Precise and even light distribution
- An energy saving of around 20% compared to traditional incandescent lamps offering the same light output

IRC - ENERGY SAVING LAMPS

Halogen IRC (Infra Red Coating) lamps are up to 30% more economical than standard halogen lamps. These lamps produce excellent luminous efficiency, have low power consumption, good colour consistency throughout the lamp life and generate less heat
