

Galileo

Design by Dalla Torre

Galileo, which owes its name to the Copernican Galilean astronomical revolution, is the new lamp by the Fanale Group, a perfect half sphere in Cor-ten suitable to several contexts, from the most traditional to the most modern, where a *melting pot* of styles aims to create surprising and never-dull atmospheres.

The lamp's strong materiality obtained thanks to the masterly use of Cor-ten is one of Galileo's strong points. The wide semicircle, in fact, has a burnished colouring that presents intriguing light and shade effects and nuances that attribute to it strong identity.

The manufacturing of this lamp, as all those of the Il Fanale's, follows a rigorously artisanal approach sticking to tradition. The metal undergoes an accelerated oxidation process to obtain a gloss called "old-looking".

Every single element of the lamp is hand-cleaned, polished or made opaque according to the needs by means of the right waxes and patinas.

The luminous source is VARIED: E27 incandescent and fluorescent, HID halogen 35-70-150 w, LED 30-40-60 w.

Technical features

Name: Galileo

Design: Della Torre

Brief description: A perfect half sphere in Cor-ten suitable to several contexts, from the most traditional to the most modern, where a *melting pot* of styles aims to create surprising and never-dull atmospheres. A rigorously artisanal approach sticking to tradition.

Materials: Iron-brass

Colour: Old-looking

Luminous Source: See above

Sizes: Dm. 30-40-60-80
